

KOI CARE
Koivits

 spray-on food
 vitamin supplement

Growing fish rarely get the required amounts of vitamins they need to stay in prime condition, and maintain a healthy immune system.

Koivits is a spray-on preparation to add to the fish food just before feeding. It contains all the essential vitamins fish need to fight stress related diseases, stay healthy, and in peak coloration.

Spray Koivits onto the food daily for healthy fish, or add 10mls directly to 40 gallons (180 L) of pond water. For sick and convalescing fish add double this dose, to boost the immune system and help the fish fight their infection.
